Hi Shaun;

Thanks for your good work on this.

I have some minor changes to the figure which are identified on the attached *.pdf file. Please let me know if you have any questions about my edits.

As for moving the KCIA stormwater information to GIS, this is a work in progress. It is something that would be good to have completed within the next couple of months. As a first step it would be good to have the stormwater drain lines and catch basins/manholes/vaults identified on one or more GIS layers. After the stormwater information is transferred to GIS, it would probably be good for you, me, and Jeff Stern to sit down and talk about the kind of information we would like to see loaded into GIS. I know SPU has some information on KCIA. In fact, I think the AutoCAD file I sent you had a lot of information that was pulled from SPU's GIS. In fact, It might be best to put you in touch with a GIS person at SPU. Let me know if this would be helpful and I can try to find a contact over there.

Thanks,

Bruce

Bruce,

Here is your map. Let me know if you would like any changes.

Regarding moving the CAD file to GIS, it looks like the data won't require any moving to get it into the proper space relative to our data. However, it will require some work to clean it up. Let me know how high a priority this is and I'll convert it accordingly.

Hi Shaun;

Here is the file saved under a different name.

If this doesn't work, I can see about having it saved under AutoCAD 2000.

Thanks,

Bruce
